SUMMARY

As a passionate front-end enthusiast, I've cultivated expertise across a spectrum of languages, frameworks, and tools, primarily within the realm of front-end development.

I thrive in fast-paced environments and have a strong desire to continually grow and master my craft. I relish the challenges that come with working in dynamic settings, as they push me to constantly expand my skill set and stay at the forefront of industry trends. With a natural curiosity and an insatiable thirst for knowledge, I possess the ability and the drive to quickly learn new concepts and technologies, allowing me to adapt to ever-evolving landscapes with ease trough effective communication and time management.

EXPERIENCE

Fullstack (FE-Heavy) Engineer

Wolven   **October 2012 - April 2023, Florianópolis, SC - Brazil**

• Spearheaded and engineered the development of a desktop app for General Electric. The app allowed users to edit specific device settings and import/export XML files.
• Developed user's subscription payments for Couchsurfing's website.
• Developed improvements on Veriblock website and its digital wallet app.
• Engineered a private touchscreen desktop web app for WEG's subsidized factory.
• Engineered the hybrid mobile application, WEG IoT, for a prominent multinational enterprise.
• Implemented the front-end of the SAP Hybris platform on several multinational companies such as Cia. Hering, WEG Industries and Adveo Group International S.A.
• Implemented the new design for RedWeek website, which has over 600,000 accesses a month.
• Designed a web application as part of an NBC Sports campaign, allowing users with no prior soccer knowledge to engage via their preferred social media platform.
• Migrated a large WordPress multi-cooperative blog to a WordPress multisite environment.

Software Engineer

CONPEDI   **September 2010 - September 2012, Florianópolis, SC - Brazil**

• Designed and developed a web app to streamline the process of receiving, evaluating, editing, and publishing academic articles.
• In addition to the evaluation process, I devised a mechanism that allowed the system administrator to compile approved articles into a cohesive book.
• Developed a site generator, where each articles compilation would then be published on a newly generated website, specifically tailored for each event where the articles were presented.

Web Developer

LAED   **March 2008 - August 2010, Florianópolis, SC - Brazil**

• Engaged in multiple enhancements for Moodle, an open source learning platform.
• Developed a task management tool to be used by the system's managers to generate student's reports.
• Creation of a chat module for shared classes.

EDUCATION

Bachelor of Computer Science
UNIVERSIDADE FEDERAL DE SANTA CATARINA • Florianópolis, SC - Brazil • 2014
• Valedictorian Speech

Electronics Technician
SENAI • Jaraguá do Sul, SC - Brazil • 2006
